

### Craig Gordon - Site Agent

My role is to look after the all of the outside of the stadium while it is being built, which includes the plazas (the walkways around the stadium), the building of roads, and the drainage underground.

I help oversee the delivery of the tarmac for the roads, the pipes for the drains, and also the railway works for the nearby Falmer station. But I don't do these all by myself; I am part of a team and every person has their own role.

I also have to meet with local authorities, such as the council, as and when we need to. For example we needed temporary traffic lights put in place and you need permission for this to happen.

Safety is obviously important for us, and everyone in the office is trained in health and safety procedures.
